Explanation of Medicaid Policy

Drugs with Criteria and Limits

Many drugs in the Medicaid pharmacy program do not require a Prior Authorization (PA), but are still subject to restrictions that are outlined in the Medicaid Pharmacy Services Manual and the Medicaid Physician Services Manual. This section serves as a quick reference for the specific policies that govern coverage of these drugs.

In accordance with the Utah Medicaid Provider Manual for Pharmacy Services, SECTION 2, Chapter 4-10, Limits on Certain drugs, some drugs are limited by a quantity in any thirty-day period. These drugs do not qualify for early refills, as stated in Chapter 4-7, Early Refills. The limits listed are those approved by the Medicaid Drug Utilization Review (DUR) Board. Physicians and other prescribers who feel that a patient has specific needs that exceed the limits may appeal to the DUR Board. All medications remain subject to all the other requirements of the Utah Medicaid Pharmacy Program, as described in the Utah Medicaid Manual for Pharmacy Services.

Drugs Requiring Prior Authorization

In accordance with the Utah Medicaid Provider Manual for Pharmacy Services, SECTION 2, Chapter 3, certain drugs that are covered by the Medicaid program may require the patient and physician to meet specific criteria and demonstrate medical necessity in order to receive the requested medication. Detailed information regarding prior approval criteria for individual medications and classes of medications is provided in this manual.

Please note that prior authorization for a medication is client specific, and product specific. Prior authorization cannot be transferred to another product, nor to another strength of a product that has been approved. The prior authorization cannot be transferred to another client.

To initiate a prior authorization request, the physician must obtain the most current criteria sheet from the Medicaid Pharmacy Services Website at <https://medicaid.utah.gov/pharmacy/pharmacy-program> and gather all of the records that are requested in the criteria set for the medication being prescribed. The requests can be faxed to (855) 828-4992. The criteria sheet must be completely and legibly filled out and must be accompanied by all requested information. Incomplete and illegible requests will be returned to the prescriber without being processed by Medicaid. All injectable products, with the exception of 10ml vials of insulin and anti-Hemophilia factor, require prior authorization under the Non-Traditional Medicaid plan.

Non-Traditional Medicaid has additional restrictions in place. In accordance with the Utah Medicaid Provider Manual for Non-Traditional Medicaid, SECTION 2, Chapter 2-19.2, no lozenges, suckers, rapid dissolve, lollipop, pellets, patches or other unique formulation delivery methodologies developed to garner “uniqueness” will be covered, except where the specific medication is unavailable in any other form (Duragesic and Actiq). Drugs are covered for labeled indications only.

Drugs Requiring ICD.9 Codes

All atypical antipsychotics require a select diagnosis code using the ICD.9 format. Covered diagnoses are determined according to the three following age groups: ages 0 through 6; ages 7 through 19; ages >19. Attachments to Section 2 of the Medicaid Pharmacy Provider Manual show covered ICD.9 codes for each age group respectively. All stimulants for the treatment of ADD/ADHD in clients under the age of 19 require the appropriate ICD.9 diagnosis code for payment.

Cumulative limits on long-acting narcotic analgesics and short-acting single entity narcotic analgesics are waived for the treatment of cancer-related pain. Additionally, Fentanyl 100mcg patches, fentanyl lozenges, and fentanyl buccal tablets are covered only for terminal cancer-related pain. The prescriber must provide an appropriate ICD.9 diagnosis code for terminal cancer on prescriptions for these drugs.

It is the prescriber's responsibility to provide the correct ICD.9 code on each prescription for an atypical antipsychotic, ADD/ADHD medication, or narcotic pain medication for cancer pain. The ICD.9 code may be hand-written by the prescriber on the prescription or computer generated by prescribing software. Pharmacy providers may also obtain ICD.9 codes verbally from prescribers, and note the date, time, and name of the physician's representative providing the ICD.9 code on the original hard-copy prescription. The pharmacist must enter that ICD.9 code into the appropriate diagnoses field when processing a claim.

Additionally, Bupropion products and Cymbalta require an ICD.9 code classification to be entered by the pharmacy when billed through the Pharmacy POS System.

- Bupropion must be classified as smoking cessation (305.1) or depressive disorders (311).
- Cymbalta prescriptions must be classified as neuralgias (729.2) or depressive disorders (311).

As part of normally required counseling pharmacy staff may ask a patient what condition is being treated and categorize the prescription accordingly. For these two drug products, the diagnosis does not need to be written on the prescription by the prescriber.

Exceptions to Policy

All requests for exceptions to policy require a petition to the DUR board. DUR meetings are held on the second Thursday of every month. Petitions to the DUR board must be received one week prior to the monthly meeting. Petitions may be faxed to the prior authorization team.

Drugs with Criteria and Limits	
ADD/ADHD Medications	
Amphetamines	Amphetamines: <ul style="list-style-type: none"> • Age 0-2: Prior Authorization Required – see Stimulants (for Children). • Age 3-5: Immediate-release Adderall and Dexedrine generic formulations are covered - Valid ICD-9 code must be written on the prescription. • Age 6-18: Covered - Valid ICD-9 code must be written on the prescription. • Age 19+: Prior Authorization Required - see Stimulants (for Adults).
Methylphenidate & Derivatives	Methylphenidate & Derivatives <ul style="list-style-type: none"> • Age 0-5: Prior Authorization Required – see Stimulants (for Children). • Age 6-18: Covered - Valid ICD-9 code must be written on the prescription • Age 19+: Prior Authorization Required - see Stimulants (for Adults). • Long Acting Methylphenidate is limited to 64 per 30 days. • Daytrana patch is non-covered over age 18 or for Non-Traditional Medicaid clients.
Strattera	Strattera <ul style="list-style-type: none"> • Covered for ages 6+. • Cumulative limit of 66 capsules in 30 days.
Analgesics	
Tramadol/ Ultracet/ Tramadol ER	Tramadol/Ultracet: <ul style="list-style-type: none"> • Cumulative limit of 180 tablets in 30 days Tramadol ER <ul style="list-style-type: none"> • Cumulative limit of 90 tablets in 30 days
Fentanyl Patch	Fentanyl Patch: <ul style="list-style-type: none"> • Cumulative limit of 15 patches in 30 days • The cumulative limit may be overridden if the prescriber provides a valid ICD-9 diagnosis code for terminal cancer. • The 100mcg Fentanyl Patch is <i>only</i> covered with valid ICD-9 diagnosis code for terminal cancer. • Mutually exclusive with methadone and other long-acting opioids. • Unique Fentanyl formulation dosage forms (buccal, nasal, and sublingual) are not covered for Non-Traditional or PCN clients.
Fentanyl Formulations (Fentora, Actiq, Lazanda, Onsolis, Abstral and Subsys)	<ul style="list-style-type: none"> • Only a covered benefit if the prescriber provides a valid ICD-9 diagnosis code for terminal cancer.
Methadone	Methadone : <ul style="list-style-type: none"> • Cumulative limit of 150 tablets in 30 days.

	<ul style="list-style-type: none"> • Liquid dosage forms are limited to 2000ml per 30 days. • The cumulative limit may be overridden if the prescriber provides a valid ICD-9 diagnosis code for terminal cancer. • Mutually exclusive with fentanyl patches and long-acting opioids.
Long-Acting Opioids	<p>Long-Acting Opioids:</p> <ul style="list-style-type: none"> • Cumulative limit of 90 tablets in 30 days. • The cumulative limit may be overridden if the prescriber provides a valid ICD-9 diagnosis code for terminal cancer. • Preferred Drug List applies to this class. • Mutually exclusive with methadone and fentanyl patches.
Short-Acting Opioids	<p>Short-Acting Opioids:</p> <ul style="list-style-type: none"> • Cumulative limit of 180 tablets in 30 days • Liquid dosage forms are limited to 2000ml per 30 days. • The cumulative limit may be overridden on non-APAP containing short acting opioids if the prescriber provides a valid ICD-9 diagnosis code for terminal cancer (APAP containing short acting opioids may not exceed 180 tablets in 30 days).
Atypical Antipsychotics (<i>Abilify, Clozaril, Geodon, Invega, Risperidal, Risperdal Consta, Seroquel, Symbyax, Zyprexa</i>)	<ul style="list-style-type: none"> • Valid ICD-9 diagnosis code is required on each prescription. • ICD-9 codes may be found in the Utah Medicaid Provider Manual for Physicians Services and Anesthesiology. • ICD-9 code must be correct for the patient's age. • Risperdal Consta non-covered for Non-Traditional or PCN clients.
Benzodiazepines	<ul style="list-style-type: none"> • Cumulative limit of 120 tablets/capsules in 30 days. • Short acting benzodiazepines that are typically used to treat insomnia are governed by the criteria for sedative-hypnotics.
Bupropion (<i>Zyban, Wellbutrin</i>)	<ul style="list-style-type: none"> • One of two valid ICD-9 diagnosis codes is required on each prescription. • ICD-9 311 indicates depressive disorders. • ICD-9 305.1 indicates smoking cessation. • Pharmacy staff may ask a patient which condition is being treated and categorize the prescription accordingly. The diagnosis does not need to be written on the prescription or provided by the prescriber. • Wellbutrin XL is non-covered under Non-Traditional Medicaid.
Celebrex	<ul style="list-style-type: none"> • Cumulative limit of 60 capsules in 30 days.
Cymbalta	<ul style="list-style-type: none"> • One of two valid ICD-9 diagnosis codes is required on each prescription. • ICD-9 311 indicates depressive disorders. • ICD-9 729.2 for neuralgias, etc. • Pharmacy staff may ask a patient which condition is being treated and categorize the prescription accordingly. The diagnosis does not need to be written on the prescription or provided by the prescriber. • The maximum daily dose is 60mg. Monthly quantity limits are set accordingly. • Doses in excess of 60mg per day require an eight-week documented trial and failure of a 60mg daily dose.
Diphenoxylate	<ul style="list-style-type: none"> • Cumulative limit of 180 tablets in 30 days.

Containing Products						
Flu Vaccine		<ul style="list-style-type: none"> Limited to 0.5ml 				
Inhalers		LIMIT IN ANY 30 DAY PERIOD				
<p>The cumulative number of inhalers in any 30-day period is limited for a Medicaid client. The limit is set by class (excepting Foradil and Serevent which are limited by NDC number). This means the highest number in any one class is the maximum. When there are more than two sizes or strengths for a given product, the limit is based on the largest size or strength. There are two groups of inhalers: oral and nasal. For each group, the limits are stated below.</p>						
Inhaler Class	Generic Name	Brand Name	Product Size	Dose per Inhaler	Maximum No. In 30 Days

Metformin	<ul style="list-style-type: none"> • The maximum daily dose is 2550mg. Dosage limits are set accordingly. 																
Migraine Medications																	
Triptans (<i>Imitrex, Zomig, Amerge, Axert, Maxalt, Relpax</i>)	Triptans: <ul style="list-style-type: none"> • Cumulative limit of 9 dosage units per 30 days - all forms count towards this limit. • Examples of drugs in this class include Imitrex, Maxalt, and Zomig. • Preferred Drug List applies to this class. 																
Cambia	Cambia: <ul style="list-style-type: none"> • Cumulative limit of 9 dosage units per 30 days. 																
Muscle Relaxants	<ul style="list-style-type: none"> • Cumulative limit of 30 tablets in 30 days. • Dantrolene, Baclofen, and Tizanidine are not included in this 30 day limit policy. 																

	<ul style="list-style-type: none"> • Preferred Drug List applies to this class.
Plan B	<ul style="list-style-type: none"> • Cumulative limit of two kits per month. • OTC products included (prescription required).
Pristiq	<ul style="list-style-type: none"> • Limit of 30 tablets in 30 days.
Proton Pump Inhibitors	<ul style="list-style-type: none"> • Cumulative limit of 30 units in 30 days. • Prior authorization required for twice daily dosing – use Non-Preferred drug authorization criteria. • Some proton pump inhibitors are covered for twice daily dosing without prior authorization (<i>see FDA indications</i>). • Preferred Drug List applies to this class.
Savella	<ul style="list-style-type: none"> • Maximum daily dose of 100mg per day. • Doses of 200mg per day may be approved after a minimum two-month trial of the 100mg per day dose.
Sedative Hypnotics for sleep (<i>Dalmane, Sonata, Somnote, Halcion, Ambien, Doral, Restoril, Lunesta, Rozerem, and their generics</i>)	<ul style="list-style-type: none"> • Cumulative limit of 30 units in 30 days. • Benzodiazepines that are typically used to treat insomnia are considered part of this class. • Preferred Drug List applies to this class.
Synera	<ul style="list-style-type: none"> • Limit of 5 patches per 30 days

Drugs Requiring Prior Authorization	
Adult Acne	<ul style="list-style-type: none"> • Diagnosis of acne vulgaris AND/OR • Nodular acne AND/OR • Cystic acne. • AUTHORIZATION: 6 months. • RE-AUTHORIZATION: Documentation indicating patient has had at least a 25% improvement or more from baseline. Re-authorization is then for 6 months.
Amitiza	<ul style="list-style-type: none"> • Patient must be age 18 or above • Other causes of constipation (including non-opioid drugs) must be ruled out • Diagnosis of Chronic Idiopathic Constipation: <ul style="list-style-type: none"> ▪ Documented failure within the last 12 months using <ul style="list-style-type: none"> • One fiber laxative AND • Two stimulant laxative products • Diagnosis of Irritable Bowel Syndrome with Constipation: <ul style="list-style-type: none"> ▪ Documented failure within the last 12 months using <ul style="list-style-type: none"> • One fiber laxative AND • One osmotic laxative (magnesium salts or polyethylene glycol based laxatives) • Diagnosis of Opiate-Induced Constipation: <ul style="list-style-type: none"> ▪ Documented failure within the last 12 months using <ul style="list-style-type: none"> • One stool softener AND • One stimulant laxative product • AUTHORIZATION: 6 months for chronic constipation • RE-AUTHORIZATION: Trial off Amitiza, using other laxatives, for at least 30 days.
Ampyra	<ul style="list-style-type: none"> • Minimum age requirement: 18 years old. • Documented diagnosis of Multiple Sclerosis. • No history of seizures. • No history of moderate to severe renal impairment, as evidenced by a creatinine clearance rate greater than or equal to 51mL/min. • AUTHORIZATION: Initial authorization will be granted for three months. Three months is sufficient to assess efficacy in each patient. • RE-AUTHORIZATION: Reauthorization period is 1 year. Updated letter of medical necessity indicating: no seizures, current renal function greater than or equal to 51ml/min, and documented treatment efficacy (i.e. an increase in walking speed).
Androgens	<p>Danazol for Females:</p> <ul style="list-style-type: none"> • Only FDA-approved uses will be considered. Please submit appropriate documentation describing one of the following: <ul style="list-style-type: none"> ○ Hormone-responsive endometriosis ○ Trial and failure of at least one other treatment for fibrocystic breast disease ○ Trial and failure of at least one other treatment for hereditary angioedema <p>Androgens for males</p> <ul style="list-style-type: none"> • ≥ 19 years old • Males only • Diagnosis of 253.4 or 257.2

	<ul style="list-style-type: none"> • Symptoms of testosterone deficiency • Two morning testosterone levels below the individual lab's reference range (different laboratories use different assays and thus may have different ranges which are considered low, optimal, or high) • AUTHORIZATION: 6 months • RE-AUTHORIZATION: 1 year at a time. • Danazol® for Females: Requests must be accompanied by progress notes or a letter of medical necessity justifying continued therapy. Therapy must be for an FDA-approved use. • Androgens for males: Requests must be accompanied by two morning testosterone levels, drawn on different days <u>while on androgen therapy</u>, in order to verify drug absorption. Labs drawn while off androgen therapy will not be accepted. If labs are not obtained while on androgen therapy, the patient must wait 6 months (androgen free) before re-applying for a new authorization.
Antibiotics (Injectable) for Non-Traditional Medicaid Clients	<ul style="list-style-type: none"> • Injectable antibiotics and diluents associated with the preparation and administration of injectable antibiotics are available under the following circumstances: <ul style="list-style-type: none"> • Continuation of treatment that was started in the hospital; • Documented diagnosis of cellulitis; • Documented diagnosis of osteomyelitis • Prior authorization MUST include the anticipated duration of therapy. • AUTHORIZATION: Prior authorization will be granted for the requested duration of therapy. • RE-AUTHORIZATION: Updated letter of medical necessity.
Antidiabetic Agents	NOTE: Utah Medicaid's pharmacy point of sale system has been programmed to automatically check the patient's records for the following information. If the information is found, an automatic PA will be given at the point of sale, without intervention from the pharmacist or prescriber. If the required information is not found and the claim is rejected, the prescriber can manually request a PA.
DPP-4 inhibitors and combination products	<ul style="list-style-type: none"> • Age ≥ 18 yrs • Diagnosis of diabetes mellitus type 2 • No diagnosis of pancreatitis • Previous ≥ 90 day trial of metformin OR sulfonylurea OR insulin
GLP-1 Receptor Agonists	<ul style="list-style-type: none"> • Age ≥ 17 yrs • Diagnosis of diabetes mellitus type 2 • No diagnosis of thyroid tumors • No concurrent short- or intermediate-acting insulins (30 day overlap allowed for therapy switch) • Previous ≥ 90 day trial of metformin OR sulfonylurea OR insulin • Concurrent treatment with metformin OR sulfonylurea OR TZD
TZDs and combination products	<ul style="list-style-type: none"> • Age ≥ 18yrs • Diagnosis of diabetes mellitus type 2 • No diagnosis of heart failure • Previous ≥ 90 day trial of metformin OR sulfonylurea OR insulin
SGLT2 Inhibitors	<ul style="list-style-type: none"> • Age ≥ 18yrs • Diagnosis of diabetes mellitus type 2

	<ul style="list-style-type: none"> No diagnosis of bladder cancer Diagnosis of diabetes mellitus type 2 Previous \geq 90 day trial of metformin OR sulfonylurea OR insulin
Cycloset	<p>Cycloset:</p> <ul style="list-style-type: none"> Age > 18 years. Diagnosis of Type 2 Diabetes. Failure on or contraindication to Metformin. May not be used concurrently with a TZD (i.e. Avandia or Actos) or by lactating women. Maximum approved dose is 4.8mg daily. Initial authorization is for 6 months – renewal periods of 1 year require documentation of improvement of A1C and/or fasting plasma glucose. <p>NOTES: This form is for Non-Traditional clients only. Traditional clients may receive this medication without a prior authorization.</p> <ul style="list-style-type: none"> AUTHORIZATION: 1 year RE-AUTHORIZATION: Updated letter of medical necessity
Insulin Pens	<p>Meet one or more of the following:</p> <ul style="list-style-type: none"> legal blindness debilitating rheumatoid or osteoarthritis of one or both arms, hands, and/or one or more fingers reductive deformities of one or both arms, hands, and/or one or more fingers Parkinsonism or essential tremor mental retardation (severe intellectual disability) any condition that necessitates that a patient, greater-than-or-equal-to the age of 19 years, have a legal guardian other than him/herself <p>NOTES:</p> <ul style="list-style-type: none"> Patient age of less-than-or-equal-to the age of 18 years is not sufficient justification for approval of insulin pens(s). Please consider before applying for PA: Utah Medicaid is happy to replace any insulin <u>vials</u> that a patient may break or otherwise render unusable. <ul style="list-style-type: none"> AUTHORIZATION: 1 year RE-AUTHORIZATION: Updated letter of medical necessity
